

## hyperfit® line

### Products with hyperfit® sealing concept

Components featuring the AVS Römer hyperfit sealing concept offer excellent hygiene. The dead space free design enables quick, easy and complete cleaning in place (CIP). This makes the hyperfit variants ideal for transferring hygiene-critical media.

### Innovative sealing concept, maximum hygiene

Product line hyperfit®

# Innovative solution for hygiene-critical applications

The moulded seal offers decisive hygiene advantages, ensuring quick, easy and complete cleaning. The tube guide is integrated directly into the moulded seal. Medium accumulation is thus prevented by the dead space free concept.

Our components with the hyperfit sealing concept offer a clear hygiene advantage due to their dead space free design. Due to their sensitivity, the pressure range and installation conditions for the intended use must be taken into account.

## ○ **Dead space free**

Prevents the accumulation of medium and microbiological growth.

## ○ **Ultimate hygiene**

Easy to clean and rinse – for quick medium change.

## ○ **Safe and efficient**

Compact design at full flow without cross-sectional restriction.

## ○ **Tailored to your requirements**

Variants or customised special solutions possible.
